

# RELEASE NOTES V1.2

**MISSION CONTROL V1.2 (FW 0.104.5.2)**

**ISSUE/FEATURE**

**Increased user-adjustable delay**

The maximum user-adjustable delay has been increased from 341ms to 2000ms, matching competitor offerings and responding to user requests.

**Access to Speaker Preset Designer Tool**

Users can now access a Speaker Preset Designer Tool to create their own speaker presets. Access is enabled via a unique key file, which will be generated upon request. Please note that a fee applies. Details are provided upon inquiry. The key file is installed in Mission Control via the menu "File" → "Manage Application Keys...". The System Designer can be accessed via the "View" menu. The brand-ID prefix in each key file pre-fills the brand-ID in the speaker preset metadata. The full brand name, linked to the brand-ID, will be shown in future preset selection UIs.
